Thermax bags Rs. 321 crore worth order: to build and commission a captive power plant in Africa

Pune: October 30, 2014

Energy and environment major, Thermax Limited has received an order from a leading African conglomerate to supply a captive power project for one of their cement plants. The scope of work includes system design, manufacture, supply and supervision of erection and commissioning of the plant.

The order valued at approximately Rs. 321 crore was won against stiff global competition. More importantly, this was a repeat order from the client and reinforces the confidence of African customers in Thermax's ability to provide lump sum turnkey solutions for their power needs.

“We had initiated the entry of our project business in Africa two years ago. It is encouraging that we have already gained customer trust and begun supporting their power requirements,” says M.S. Unnikrishnan, MD and CEO of Thermax.

The power plant, to be commissioned within a time frame of 15-16 months, will utilise the latest generation AFBC (Atmospheric Fluidised Bed Combustion) boilers and high pressure steam cycle to facilitate optimal plant efficiency. State-of-the-art air-cooled condensers will ensure low water utilisation by the power plant.

About Thermax Limited: Thermax Limited, a leading energy and environment solutions provider is one of the few companies in the world that offers integrated innovative solutions in the areas of heating, cooling, power, water and waste management, air pollution control and chemicals. Thermax has manufacturing facilities in India, China and Europe. The sustainable solutions Thermax develops for client companies are environment-friendly and enable efficient deployment of energy and water resources. For more information visit www.thermaxindia.com
